Set #7

Due Wednesday May 1 2019

Problems:

1. Hayes Text 7.4.
3. Hayes Text 8.2.
4. Hayes Text C8.1(a) and then part (c) with respect to part (a) only. Do not work part (b). This means that you will be estimating the power spectrum just for fixed model orders of $p = 6, 8, \text{ and } 12$ just once, not for 20 realizations as described in part (b).
5. TBD?
